

QUICK START GUIDE

Download the link ("Download the PC Version") under StevensDRAW™ on the website below*. It will autostart. Follow the on-screen instructions. Now proceed to set up AutoCAD to recognize StevensDRAW™.

If you cannot find StevensDRAW™ under C:\Program Files\, look under C:\Program Files (x86)\.

- 1) In order for AutoCAD™ to be aware of StevensDRAW™, we must add a partial menu file and a support path. This task is achieved by adding a Startup routine to the AutoCAD Startup Suite.
 - Launch AutoCAD and type "AppLoad" at the command Prompt.
 - In the resulting 'Load/Unload Application' window click the Content Button in the Startup Suite Box.
 - In the resulting 'Startup Suite' Dialog box click the 'Add' button.
 - In the resulting file dialog box navigate to and select the file C:\Program Files\StevensDRAW\Lisp\StartStevensDRAW.lsp. Make sure the 'Files of Type' box is set to 'AutoCAD Apps' so you can see the lisp file. Double click the file or click 'Add'.
 - That will return you to the 'Startup Suite' window, listing the file & path now.
 - Click the 'Close' button in the 'Startup Suite' window.
 - Click the 'Close' button in the 'Load/Unload Application' window.
 - Depending on your AutoCAD™ version you may have to restart AutoCAD to see the StevensDRAW™ Menus.
 - Click the StevensDRAW™ toolbar. Click 'Load StevensDRAW.' Do this last step each time you start AutoCAD.

- 2) Prior to being able to work with StevensDRAW™ you must load the Stevens.dwg prototype drawing. It includes necessary setup information. Save your template as a .dwt file extension. In AutoCAD, go to Tools>File Tab>Template settings and set to your new template.
 - AutoCAD 2000,2002 users must use Stevens.dwg located in the Acad2000 folder of StevensDRAW™ (typically C:\Program Files\StevensDRAW\Acad2000\Stevens.dwg)
 - AutoCAD 2004,2005,2006 users must use Stevens.dwg located in the Acad2004 folder of StevensDRAW™ (typically C:\Program Files\StevensDRAW\Acad2004\Stevens.dwg)
 - AutoCAD 2007 & higher users must use Stevens.dwg located in the Acad2007 folder of StevensDRAW™ (typically C:\Program Files\StevensDRAW\Acad2007\Stevens.dwg)

- 3) You are now ready to start using StevensDRAW™. For further instructions reference the StevensDRAW™ User's Guide, available from the pulldown menu or in the help folder in the StevensDRAW™ directory.

NOTE: AutoCAD 2010 and higher requires VBA Enabler available from Autodesk®.
