VALANCE – ATTACHED SOFFIT

Design Details

VALANCE

Stevens Advantage valance, slope valance and valance with attached soffit units are designed to allow continuous valance aprons under wall units. A finished end/drop left or drop right indication lowers the designated end panel to align with the valance rail. Field cutting of intermediate sides is not required to install under-cabinet valance lighting. Return corners are not required upon installation.

Because cabinet bottom is set up in relation to door bottom edge, exposed hinges will not align with conventional cabinet hinge locations. Pulls and locks will not align with conventional pull and lock locations.

ATTACHED SOFFIT

Stevens Advantage attached soffit units are designed with integral soffit ends, eliminating the need for on-the-job fabrication of soffit structures. The soffit panels align with door reveals and can be removed for easy installation. Cabinet support rails in the upper section are set down to allow for easy adjustment of the end panels for the perfect fit. Soffit heights are set to 12" as a default but can be specified from 6"-18" high in 1" increments.
